Observations

Visual Observation	Remarks
	<p>Microbial Contamination (salmonella)</p> <p>We only harvest mature and perfect fruit directly from the tree.</p> <p>We utilize Garra tool to handle the fruit to ensure against broken skin which is a vector for contamination.</p>

	<p>Insect Infestation For organic cacao, natural organic insect repellents are used. When the environment is balance insect infestation is unlikely</p>
	<p>Foreign objects like rocks, dirt, or debris from the field When fruits are harvested and broken and the beans are extracted. But the actual removal of this foreign objects are done at the later stage during drying</p>

Sincerely,
