

CEPOTX site visit 9th September 2026 — Sítio Cacau na Veia

FSVP Site Inspection Record · TrueSight DAO / Agroverse

This document establishes the record for FSVP compliance requirements (21 CFR 1.470–1.514) of our site visit to the CEPOTX facility at Sítio Cacau na Veia — a member property of the COOPCAO cooperative (CEPOTX family) in Pacajá, Pará, on 9th September 2026. Evidence was captured on-site: 4 geotagged photographs and accompanying walk video, archived in the media-archive pipeline (farm_media_manifests/cacau-na-veia-pacaje.json). Each facility below lists the geo location, the preventive controls in place, and the observations examined on site.

Supplier and visit dates

- **Supplier name visited:** CEPOTX — Cooperativa Central de Produção Orgânica da Transamazônica e Xingu (Altamira/PA). FSVP registration VALID (FFR 14674182470)
- **Sub-cooperative:** COOPCAO (CEPOTX family)
- **Site name:** Sítio Cacau na Veia (Pacajá, Pará)
- **Site code:** N-06-37 (CEPOTX site code — COOPCAO family; read on-site and confirmed with CEPOTX)
- **Registered owner / host:** Jader Adriano da Silva Santos (CEPOTX President, COOPCAO) & wife
- **Date:** 9th September 2026 (photos 10:38–10:43 local; 4 geotagged photographs)

Facilities visited

- 1 cacao farm (mature cacao agroforest — SAF)
- 1 cacao fermentation facility (traditional wooden box / barçaça)
- 1 cacao drying facility (covered raised wooden drying racks)

Site characteristics

- **Location:** Pacajá, Pará, Brazil — Transamazônica region
- **GPS (photo cluster):** –3.6093, –51.0337 (representative IMG_9499 EXIF, alt 105.4 m) · walk extent –3.6098..–3.6085, –51.0363..–51.0324
- **Area:** 30 ha claimed (8 ha forest + 22 ha cacao); GPS walk hull 3.02 ha across the visited corner — boundary to be confirmed by walk / CAR
- **Cacao:** mature hybrid cacao agroforest (SAF), 35+ years
- **Shade:** native Amazonian forest species through the agroforest
- **Post-harvest:** on-site traditional fermentation (wooden box) + covered rack drying

Facility A – Cacao farm (mature cacao agroforest)

Mature hybrid cacao agroforest (“SAF”) managed organically under the CEPOTX/COOPCAO system; pods harvested selectively by hand. Geo location:

- Latitude: –3.6093
- Longitude: –51.0337
- Google Map location – <https://www.google.com/maps?q=-3.6093,-51.0337> (photo cluster of plot N-06-37; representative IMG_9499 EXIF)

Observations

Visual observation	Preventive control	Examined	Remarks
Microbial contamination (salmonella)	Organic agroforest, no pesticides or artificial chemicals on the certified premise.	Grove walked and inspected on 09-Sep-2026; foliage, pods and floor observed in good condition — no spoilage lesions noted.	Confirmed on visual observation.
Insect Infestation	Organic management under native forest shade; natural balance maintained.	No pest outbreak or pod-borer damage observed during the walk.	Confirmed on visual observation.
Foreign objects like rocks, dirt, or debris from the field	Selective hand-harvest of mature pods; beans extracted on the property.	Grove floor clear during the walk; no foreign-object contamination source at the harvest area.	Field debris removal is completed at the later drying / sorting stage.

Facility A – cacao grove, Sítio Cacau na Veia — IMG_9548, captured 09-Sep-2026 (one of the archived HEIC originals).

Facility B – Fermentation facility

Traditional wooden fermentation boxes (barcaças) in a dedicated covered structure; nothing else processed in the fermentation house. Geo location:

- Latitude: -3.6093
- Longitude: -51.0337
- Google Map location – <https://www.google.com/maps?q=-3.6093,-51.0337> (fermentation structure at the site processing cluster)

Observations

Visual observation	Preventive control	Examined	Remarks
Undesirable fermentation / microbial contamination	Fermentation in dedicated wooden boxes; batch checked by smell / pH / professional taste (pH target 4.8–5.8).	Three fermentation boxes observed clean and dedicated to cacao; no off-odour.	Structures weathered but functional, consistent with traditional cacao fermentation.
Inclusion of non-cacao materials in fermentation containers	Fermentation house dedicated to cacao only.	No non-cacao material observed in the containers during the visit.	Confirmed on visual observation.
Contamination from pesticides or chemicals used in cacao plantations	Organic (certified) premise; no pesticides / artificial chemicals allowed.	No chemical containers or residues observed in the fermentation area.	Confirmed on visual observation.

Facility B – wooden fermentation boxes (barcaças), Sítio Cacau na Veia — IMG_9506, 09-Sep-2026 10:43:03 local, GPS -3.6093, -51.0337 (alt 106.1 m).

Facility B – fermentation box under inspection, Sítio Cacau na Veia — IMG_9507, 09-Sep-2026 10:43:08 local, GPS –3.6093, –51.0337 (alt 105.6 m).

Facility C – Drying facility

Sun drying on raised wooden racks under a covered structure. Geo location:

- Latitude: –3.6093
- Longitude: –51.0337
- Google Map location – <https://www.google.com/maps?q=-3.6093,-51.0337> (covered drying racks at the site processing cluster)

Observations

Visual observation	Preventive control	Examined	Remarks
Mold growth due to improper drying practices	Beans turned over frequently in the sun; drying on raised slatted racks under cover.	Beans spread in thin, even layers in mid-drying stage; no mold or clumping observed.	Confirmed on visual observation.
Inclusion of foreign objects during drying and sorting process	Drying and sorting carried out on-site; cleaning of the drying surface between batches.	No debris or foreign objects observed on the racks or in the beans.	Confirmed on visual observation.
Residues from cleaning agents or pesticides	Property within the organically certified CEPOTX/COOPCAO system; no cleaning-agent or pesticide residue sources observed.	No chemical residue sources observed at the drying premises.	Confirmed on visual observation.

Facility C – drying platform with cacao beans, Sítio Cacau na Veia — IMG_9504, 09-Sep-2026 10:42:43 local, GPS –3.6093, –51.0337 (alt 107.1 m).

Sincerely,
