

CEPOTX site visit 3rd September 2026

This document establishes record for FSVP compliance requirements of our site visit to the CEPOTX facility at Fazenda Santa Rosa (site code U-06-06), a member farm of the COPOPS sub-cooperative (Uruará/PA), on 3rd September 2026. Evidence was captured as GPS-tagged walk videos and photos, archived in the media archive and published on the Fazenda Santa Rosa farm page.

Supplier and visit dates

Supplier name visited:	CEPOTX — Cooperativa Central de Produção Orgânica da Transamazônica e Xingu
Sub-cooperative:	COPOPS — Cooperativa de Produtos Orgânicos de Perpétuo Socorro (Uruará/PA)
Site name:	Fazenda Santa Rosa
Site code:	U-06-06
Registered owner:	Antônio & Graça (family cacao plot)
Contact / host:	CEPOTX / COPOPS technical liaison (Jedielcio, CEPOTX agronomist)
Date:	3rd September 2026
Location:	Uruará region, Transamazônica corridor, Pará, Brazil
GPS (centroid):	-3.634141, -53.669688
Area:	≈ 4.75 hectares (per SunMint plot registration U-06-06)

Facilities visited

- 1 cacao farm (existing grove + restoration area)
- 1 cacao fermentation facility
- 1 cacao drying facility

Purpose

On-site verification of the organic cacao supply chain for FDA FSVP compliance (21 CFR 1.470–1.514):

1. Confirm the farm exists and grows cacao at the registered location.
2. Assess biological hazard risks (microbial contamination, insect infestation, foreign objects, mold, pesticide residues).
3. Document fermentation and drying practices that determine cacao quality and safety.
4. Capture photographic/video evidence with embedded GPS coordinates.

Facility A – Cacao farm (grove) — Fazenda Santa Rosa (U-06-06)

Microbial Contamination (salmonella)	Cacao grove walked and inspected on 03-Sep-2026 (videos IMG_8281, IMG_8293, IMG_8298, IMG_8305, IMG_8314, IMG_8317, IMG_8320, IMG_8337; photos IMG_8325, IMG_8329, IMG_8332). Mature cacao trees with pods on trunks (cauliflory); healthy canopy, no visible disease. Family grows cacao organically under the COPOPS/CEPOTX organic network (IBD NOP).
Insect Infestation	Regenerative agroforestry management with native shade and ground cover observed (IMG_8294, IMG_8303, IMG_8308, IMG_8335). No pest outbreak observed during the walk.
Foreign objects like rocks, dirt, or debris from the field	Pods harvested selectively by hand; fruit harvesting documented (IMG_8322 — harvest frame, 03-Sep-2026). Plot includes restoration area (IMG_8306, IMG_8323). No foreign-object contamination source observed at the harvest/extraction area.

Facility A — cacao grove at Fazenda Santa Rosa — IMG_8325.HEIC, captured 03-Sep-2026 14:14:50 local, GPS -3.634139, -53.670030 (alt 158.3 m).

Facility B – Fermentation facility

Geo location:

Latitude: -3.634141 · Longitude: -53.669688

Google Map location:

<https://www.google.com/maps?q=-3.634141,-53.669688> (fermentation station; IMG_8328 captured 14:15:27 local)

Undesirable Fermentation	Fermentation is carried out at a dedicated fermentation station on the farm (IMG_8328 — fermentation station photo, 03-Sep-2026). Fermentation practice is managed to avoid putrefaction and maintain controlled, quality-oriented fermentation.
Inclusion of non-cacao materials in fermentation containers	Only cacao beans are handled in the fermentation area; the station is dedicated to fermentation. No non-cacao material observed in the containers during the visit.
Contamination from pesticides or chemicals used in cacao plantations	The farm is managed organically under the COPOPS/CEPOTX organic network (IBD NOP). No pesticide or artificial chemical use observed on the premises.

Facility B — fermentation station at Fazenda Santa Rosa — IMG_8328.HEIC, captured 03-Sep-2026 14:15:27 local, GPS -3.634142, -53.670319 (alt 161.4 m).

Facility C – Drying facility

Geo location: Latitude: -3.634141 · Longitude: -53.669688
 Google Map location:
<https://www.google.com/maps?q=-3.634141,-53.669688> (drying station;
 IMG_8327 captured 14:15:16 local)

Mold growth due to improper drying practices	Beans are dried at the dedicated drying station (IMG_8327 — drying station photo, 03-Sep-2026). Sun-exposed, thin-layer drying observed at the station. No mold observed at the time of visit.
Inclusion of foreign objects during drying and sorting process	The drying station is a dedicated area adjacent to the fermentation station (IMG_8327/IMG_8328). Beans handled on the drying surface only; no debris or foreign objects observed.
Residues from cleaning agents or pesticides	Farm managed organically under the COPOPS/CEPOTX organic network (IBD NOP); no cleaning-agent or pesticide residue sources observed at the drying station or premises.

Facility C — drying station at Fazenda Santa Rosa — IMG_8327.HEIC, captured 03-Sep-2026 14:15:16 local, GPS -3.634142, -53.670254 (alt 159.0 m).

Additional photographic evidence — 03 Sep 2026 site walk

Fruit harvesting at plot U-06-06 — frame from
IMG_8322.MOV (video), 03-Sep-2026.

Vegetation and cacao — IMG_8329.HEIC, 14:15:33 local, GPS -3.634142,
-53.670331.

Site walk across the cacao area — IMG_8332.HEIC, 14:16:08 local, GPS -3.634142, -53.670031.

Declaration

I hereby attest that the information recorded in this report was verified during an on-site visit to Fazenda Santa Rosa (site code U-06-06), Uruará region, Transamazônica corridor, Pará, Brazil, on 3 September 2026. The farm is registered with CEPOTX through the COPOPS member cooperative under the name of Antônio & Graça.

Photographic and video evidence with embedded GPS was captured at the time of the visit (GPS-tagged HEIC photos and MOV video clips, archived and published on the Fazenda Santa Rosa farm page).

Sincerely,

A handwritten signature in black ink, consisting of a long, sweeping horizontal stroke followed by a small, stylized flourish.

Zhiwen Teh
