

CEPOTX site visit 3rd September 2026

This document established record for FSVP compliance requirements of our site visit to the CEPOTX facility at Sítio Raimundo & Geniza (site code U-06-07), a member farm of the COPOPS sub-cooperative (Uruará/PA), on 3rd September 2026. Evidence was captured on-site: 22 geo-located photographs and 14 GPS-tagged walk videos, archived in the media-archive pipeline (farm_media_manifests/raimundo-geniza-para.json + raimundo_geniza.zip.archive.json).

Supplier and visit dates

- **Supplier name visited:** CEPOTX — Cooperativa Central de Produção Orgânica da Transamazônica e Xingu (Altamira/PA). FSVP registration VALID (FFR 14674182470)
- **Sub-cooperative:** COPOPS — Cooperativa de Produtos Orgânicos de Perpétuo Socorro (Uruará/PA)
- **Site name:** Sítio Raimundo & Geniza
- **Site code:** U-06-07
- **Registered owner / host:** Raimundo Silva (Presidente, COPOPS) & Geniza
- **Date:** 3rd September 2026 (media records: 22 photos 10:44–13:29 local; 14 videos)

Facilities visited

- 1 cacao farm (existing trees)
- 1 cacao fermentation facility
- 1 cacao drying facility

Facilities

Facility A – Cacao farm

Geo location:

- Latitude: -3.630242
- Longitude: -53.652017
- Google Map location – <https://www.google.com/maps?q=-3.630242,-53.652017> (media cluster of plot U-06-07; representative IMG_8277 EXIF)

Observations

Visual Observation	Remarks
Microbial Contamination (salmonella)	Existing cacao grove walked and inspected on 03-Sep-2026 (videos IMG_8206, IMG_8210, IMG_8215, IMG_8259). Farm managed organically and certified IBD NOP since 2006 (Raimundo's narration, IMG_8210). Family has farmed cacao since 1980 (IMG_8210). Grove includes trinitário-forasteiro hybrid managed organically (IMG_8215).
Insect Infestation	Organic agroforestry management; native shade species (comaru, andiroba, copaíba) planted between rows for shade and ecological balance (IMG_8206). No pest outbreak observed during the walk.
Foreign objects like rocks, dirt, or debris from the field	Pods harvested selectively by hand; beans extracted on-site; the sítio runs a renovation planting (younger grove, 4 m mechanisation rows / 3 m irrigation rows – IMG_8244, IMG_8259). No foreign-object contamination source observed at harvest/extraction area.

Facility A – existing cacao tree inspection, Sítio Raimundo & Geniza (photo from 03-Sep-2026 site walk; one of the 22 archived HEIC originals).

Facility B – Fermentation facility

Geo location:

- Latitude: -3.630242
- Longitude: -53.652017
- Google Map location – <https://www.google.com/maps?q=-3.630242,-53.652017> (fermentation barçaça area; IMG_8277 captured 13:29:07 local)

Observations

Visual Observation	Remarks
Undesirable Fermentation	Fermentation is carried out in a dedicated wooden barçaça (fermentation box). Raimundo improved the fermentation structure specifically “to focus on quality cacao” – a definitive barçaça construction that does not need rebuilding every three years (IMG_8237 narration). Fermentation site confirmed by IMG_8277 (photo) and IMG_8235 (walk clip: “fermentação”).
Inclusion of non-cacao materials in fermentation containers	Only cacao beans are placed in the fermentation barçaça; the structure is dedicated to fermentation (IMG_8237 walk-through). No non-cacao material observed in the container during the visit.
Contamination from pesticides or chemicals used in cacao plantations	The sítio is organically certified (IBD NOP) since 2006; no pesticide or artificial chemical use observed on the premises (IMG_8210 narration, on-site walk).

Facility B – fermentation barçaça area, Sítio Raimundo & Geniza – IMG_8277.HEIC, captured 03-Sep-2026 13:29:07 local, GPS -3.630242, -53.652017 (alt 180.7 m).

Facility C – Drying facility

Geo location:

- Latitude: -3.630328
- Longitude: -53.652011
- Google Map location – <https://www.google.com/maps?q=-3.630328,-53.652011> (sun drying station; IMG_8236 captured 11:41:58 local)

Observations

Visual Observation	Remarks
Mold growth due to improper drying practices	Beans are dried at the dedicated sun drying station (“estação de sol” – IMG_8235 narration), in the open air on drying platforms. Sun-exposed, thin-layer drying observed at the station (IMG_8236 photo). No mold observed at the time of visit.
Inclusion of foreign objects during drying and sorting process	Drying station is a dedicated, clean area adjacent to the fermentation barçaça (IMG_8235/IMG_8236). Beans handled on the drying surface only; no debris or foreign objects observed.
Residues from cleaning agents or pesticides	Sítio organically certified (IBD NOP) since 2006; no cleaning-agent or pesticide residue sources observed at the drying station or premises (IMG_8210 narration, on-site walk).

Facility C – sun drying station, Sítio Raimundo & Geniza – IMG_8236.HEIC, captured 03-Sep-2026 11:41:58 local, GPS -3.630328, -53.652011 (alt 181.1 m).

Sincerely,
